Subject: Former Rhone Poulenc and LDW

Hello, Tom and Kathy

I left a voicemail but wanted to make you aware that I've just had a conversation with the EPA project manager (Janette Knittel) and the PRP consultant about the former Rhone Poulenc site. We discussed their schedule for completing the Corrective Measures Study (like an FS).

I'm going to share the link to the DER files with them, as this will help inform their assessment of data needs. I believe they're wrapping up data collection with one more round this spring. Let me know if you have concerns about that.

If you have questions about this area (I know I do), I'd like to talk to you. It would be helpful at some point after that to hold a TECHNICAL TOPICS ONLY meeting with the consultant and with your consulting team. I expect you'll forward this message to LDWG, and I am happy to discuss the situation with them. I'd like to avoid a big meeting with lawyers at this point. If LDWG members attend, FRP lawyers will have to come.

I don't know what kinds of thinking you've started about the sediment cleanup next to FRP but, since the sediments need cleanup, perhaps you're already thinking about the stability and other aspects of the sloped bank above the mudflat and identifying data gaps related to this area.
